

- Used for remote control of the luminaire: ON / OFF / DIMM.
- It informs about the fault of the ballast, light source, connecting wires ...
- Communicates over the wireless LPWAN network (LoRa or NB-IoT).
- Output signal 0 (1) -10V or DALI for direct control of ballast in luminaire.
- Internal digital light intensity sensor, range 5 - 100,000Lx.
- Internal digital temperature sensor in the range -30 ... 70 ° C.
- Supply voltage: 12- 24 V DC.
- Protection IP65, UV resistant, designed for outdoor installation in the LUMAWISE ENDURANCE S.
- Update using the RFAF / USB Service Key.

Function

When the power is connected, the device sends the initial message containing the measured temperature and light intensity. Sensor senses temperature and intensity of lighting every 2 minutes. After that, it sends a data message of measured values every 15 minutes.

Function setting (message from server):

- Function AUTOMAT:
 - the on / off is controlled according to the intensity measured by the light sensor
- Function SEMI-AUTOMAT:
 - Switching on / off, the brightness is set according to the set schedule (the schedule can be set by a message from the server)
 - Outside the schedule is set to Auto
- Function MANUAL:
 - Messages from the server can be turned on / off, adjust brightness and interval for sending data messages.

Example connection

Connection 0 (1) -10V (analog) + tripping relay

Description of wiring contacts:
 1 - 12/24 V power supply
 2 - GND / analog output 0(1) - 10 V (-)
 3 - control of an external relay
 4 - analog output 0(1)-10 V (+)

Connection 0 (1) -10V (analog) without relay

In the off state, the analog ballast may light up slightly (depending on gear type).

Connection DALI

Connection of one DALI light

Description of wiring contacts:
 1 - 12/24 V power supply
 2 - GND / DALI(-)
 3 - DALI(+)

For the management of DALI BUS there is not an exact cable type recommended, but it is important to keep some installation conditions. For DALI BUS lines up to 100 m the recommended min. conductor cross section is 0.5 mm². For management between 100 m -150 m a cross section of 0.75 mm² and more than 150 m the recommended min is 1.5 mm². Management of more than 300 m is not recommended. The voltage drop at the end of the installation may not be greater than 2 V.
